The fontawesome package
High quality web icons

Xavier Danaux*((LA)TEX code)
Dave Gandy†(font design)

Version 4.6.3.2, released on May 22, 2016

Abstract

The fontawesome package grants access to 634 web-related icons provided by the included *Font Awesome* font, designed by Dave Gandy and released under the open SIL Open Font License.

This package works both with XE(LA)TEX and LuaTEX (using fontspec to load the included original otf font), as well as (pdf)(LA)TEX (using an included type1 conversion and character mapping of the font).

1 Introduction

The fontawesome package aims to enable easy access in (LA)TEX to high quality icons covering web application, transportation, gender, file type, spinner, form control, payment, chart, currency, text editor, directional, video player, brand and medical pictograms. It is a redistribution of the free (as in beer) *Font Awesome* font with specific bindings for (LA)TEX.

2 Requirements

The fontawesome package requires the fontspec package when using the XeLaTeX or LuaLaTeX engines to load the included otf font. When using the (pdf)LaTeX engine, the fontawesome package doesn't require any external package.

3 Usage

`\faicon` Once the fontawesome package loaded, icons can be accessed through the general `\faicon`, which takes as mandatory argument the ⟨*name*⟩ of the desired icon, or through a direct command specific to each icon. The full list of icon designs, names and direct commands are showcased in section 4.
